

Underground infrastructure

Composite reinforcement solutions are ideal for infrastructure rehabilitation initiatives:

- Reinforce underground pipes, sewage lines, storm water management facilities, utility housings, culverts, etc.
- Internal restoration-in-place prevents costly road removal and closure
- Seismic upgrades
- Expedite emergency and unplanned repairs
- Prevent costly and dangerous infrastructure failures

Benefits of V2's Composite Reinforcement Solution

- Versatile
- Stronger, lighter, faster and easier to install
- Minimize traffic closures
- High fatigue & corrosion resistance
- Extreme temperature tolerance
- Longer lasting solution than conventional methods
- ***Significantly lower installed cost***
